*1: Rated torque is the allowable value of the average load torque at the output shaft. The rated torque for the input speed of 1000 r/min or less is the same as the rated torque of 1000 r/min.

*2: Maximum allowable torque when startup and stop during operation cycle.

*3: Maximum allowable value of the shock torque at emergency stop or external shock torque. Should be less than 1,000 times in one lifetime.

*4: Maximum allowable input speed when not under constant operation condition.

*5: Allowable constant operation hours for intermittent operation condition (Consult us when exceeding or when continuously operating).

*6: Some values are not allowable depending on the input shaft diameter.
Make sure to follow the method of motor attachment in page 88.

*1: Radial load is the value applied to the middle of the output shaft (at axial load).
*2: Axial load is the value applied to the center of the output shaft (at radial load).

Multiply radial load locating factor to the value in the above table when the radial load is applied to locations other than the middle of the output shaft.

Example of Selection

Evaluate ANFX-P120F-7ZLD-15 for following specification.

Specification:
T_A: Acceleration peak torque 100 Nm
T_R: Normal running torque 30 Nm
T_B: Peak torque at breaking 80 Nm
Shock torque: 2000 Nm
(700 times during overall lifetime)
n_A: Average input speed during acceleration 1500 r/min
n_R: Input speed with normal running 3000 r/min
n_B: Average input speed during deceleration 1500 r/min

t_A: Acceleration time 0.2s
t_R: Normal running time 5.0s
t_B: Deceleration time 0.2s
t_P: Total running time 3.0s
t_O: Standstill time 5.4s
T: Single cycle time 8.4s

Application is assumed to have almost no load.

Calculation:
Average input speed $n_E = \dfrac{0.2 \times 1500 + 5.0 \times 3000 + 0.2 \times 1500}{5.4} = 2889$ [r/min]

Average output torque $T_E = \left(\dfrac{0.2 \times 1500 \times 100^{10/3} + 5.0 \times 3000 \times 30^{10/3} + 0.2 \times 1500 \times 80^{10/3}}{5.4 \times 2889} \right)^{0.3} \times 1 = 39.6$ [Nm]

- Allowable rating output torque at average input speed $T_{OE} = \left(\dfrac{3000}{2889} \right)^{0.3} \times 46.5 = 47.0 \geqq 39.6$ → Select ANFX-P120F-7ZLD-15 temporarily.
- Cheak Average output torque 39.6 < 47.0·····OK
- Calculate %ED $\%ED = \dfrac{5.4}{8.4} \times 100 = 64.3\%$
- Cheak Average output torque 20 [min]= 1200 [s] > 5.4 [s]·····OK

$$\frac{90(2889 - 3000) - 70(2889 - 2000)}{2000 - 3000} \fallingdotseq 72$$

72% > 64.3%·····OK

- Evaluate maximum input speed 3000 [r/min] < 6000 [r/min]
- Evaluate peak torque at acceleration and deceleration 100 [Nm] < 185 [Nm]
- Evaluate shock torque 200 [Nm] < 250 [Nm] (1000 times during entire lifetime)

Durability Check of Output Shaft Part

P1 Type of IB Series uses angular bearing to allow high maximum load moment.
Make sure that your load moment do not exceed the allowable value through the following calculation.

1. Check Maximum Load Moment

$$Mmax = \frac{Frmax \cdot (Lc + Lr) + Famax \cdot La}{10^3} \quad \cdots (1)$$

Make sure that: Mmax ≦ Mc

Table 4 Symbol in Formula (1)

Frmax	Maximum radial load during the operation pattern	N [kgf]	Refer to Fig. 6.
Famax	Maximum axial load during the operation pattern	N [kgf]	
Lr, Lc, La	Load application location	mm

- Consult us when the radial load is exerted on the location exceeding the range of "L + S."
- Consult us when the value exceeds the range of allowable load. Units may sometimes be used without problem for some cases, depending on the direction of axial load and the leverage point of the load.

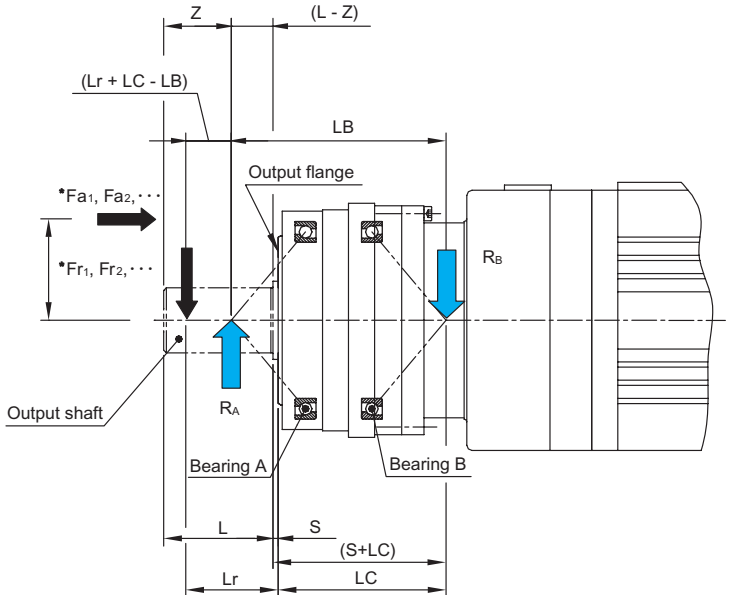

Fig. 5 External Load Effect diagram

*: *Refer to Fig. 6.
Fig. 6 shows the load of each period in the specific operation pattern.

2. Check Equivalent Load Bearing Lifetime

Check lifetime by converting to equivalent load when radial or axial load varies.

Equivalent radial load: Fre

$$Fre = \sqrt[3]{\frac{n_1 \cdot t_1 \cdot (|Fr_1|)^3 + n_2 \cdot t_2 \cdot (|Fr_2|)^3 + \cdots n_n \cdot t_n \cdot (|Fr_n|)^3}{n_1 \cdot t_1 + n_2 \cdot t_2 + \cdots + n_n \cdot t_n}} \quad \cdots (2)$$

Equivalent axial load: Fae

$$Fae = \sqrt[3]{\frac{n_1 \cdot t_1 \cdot (|Fa_1|)^3 + n_2 \cdot t_2 \cdot (|Fa_2|)^3 + \cdots n_n \cdot t_n \cdot (|Fa_n|)^3}{n_1 \cdot t_1 + n_2 \cdot t_2 + \cdots + n_n \cdot t_n}} \quad \cdots (3)$$

Equivalent autput speed: Neo

$$Neo = \frac{n_1 \cdot t_1 + n_2 \cdot t_2 + \cdots + n_n \cdot t_n}{t_1 + t_2 + \cdots t_n} \quad \cdots (4)$$

Motor Attachment Procedure

Either straight type, shaft with keyway, or D shaft may be attached to the motor shaft, because special coupling is used for shaft connection part of reducer and motor. Follow the process below from (1) through (7) for assembly. (Remove key while assembly for shaft with keyway.)

(1) Place reducer on an appropriate worktable with output shaft on the bottom side.
(2) Remove fitting of the setting hole (1 place) of the reducer unit (①in figure below).
(3) Match the location by turning by hand to tighten tightening bolt of the coupling into setting hole of the reducer unit (②in figure below).
(4) Insert motor shaft into the center hole of the coupling, press in vertically and fit the pilot part of the reducer unit and motor.
(5) Tighten motor and reducer unit with motor attachment bolt (④in figure below).
(6) Tighten coupling tightening bolt through the setting hole of the side of the reducer unit using a torque wrench bolt (④in figure below). Refer to Table 12 for necessary tightening torque.

Table 15

Coupling hole diameter	Tightening bolt	Tightening torque	Allowable transmission torque
mm		N·m	N·m
ϕ6	M3	1.67	9.18
ϕ8			7.93
ϕ9	M4	3.92	22.0
ϕ10			22.7
ϕ11			24.9

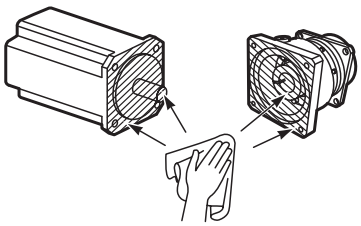
ϕ22	M6	8.83	61.8
ϕ24			66.2
ϕ28			78.3
ϕ35	M8	21.6	99.2



Make sure that the selected unit can allow maximum emergency torque (peak torque at start and stop) in your operation cycle.

$$\frac{\text{Maximum emergency torque (Peak torque at start or stop)}}{\text{Reduction ratio}} \leqq \text{Allowable transmission torque}$$

(7) Insert fitting (1 place) in the setting hole of the joint cover.

Warranty Condition	In the event that any problem or damage to the Product arises during the "Warranty Period" from defects in the Product whenever the Product is properly installed and combined with the Buyer's equipment or machines, maintained as specified in the maintenance manual, and properly operated under the conditions described in the catalog or as otherwise agree upon in writing between the Seller and the Buyer or its customers; the Seller will provide, at its sole discretion, appropriate repair or replacement of the Product without charge at a designted facility, except as stipulated in the "Warranty Exclusions" as described below. However, if the Product is installed or integrated into the Buyer's equipment or machines, the Seller shall not reimburse the cost of: removal or re-installation of the Product or other incidental costs related thereto, any lost opportunity, any profit loss or other incidental or consequential losses or damages incurred by the Buyer or its customers.
Warranty Exclusions	Notwithstanding the above warranty, the warranty as set forth herein shall not apply to any problem or damage to the Product that is caused by: 1. installation, connection, combination or integration of the Product in or to the other equipment or machine that is rendered by any person or entity other than the Seller; 2. insufficient maintenance or improper operation by the Buyer or its customers, such that the Product is not maintained in accordance with the maintenance manual provided or designated by the Seller; 3. improper use or operation of the Product by the Buyer or its customers that is not informed to the Seller, including, without limitation, the Buyer's or its customers, operation of the Product not in conformity with the specifications, or use of lubricating oil in the Product that is not recommended by the Seller; 4. any problem or damage on any equipment or machine to which the Product is installed, connected or combined or on any specifications particular to the Buyer or its customers; 5. any changes, modifications, improvements or alterations to the Product or those functions that are rendered on the Product by any person or entity other than the Seller; 6. any parts in the Product that are supplied or designated by the Buyer or its customers; 7. earthquake, fire, flood, sea-breeze, gas, thunder, acts of God or any other reasons beyond the control of the Seller; 8. normal wear and tear, or deterioration of the Products, parts, such as bearings, oil-seals; 9. any other troubles, problems or damage to the Product that are not attributable to the Seller.

⚠ SAFETY PRECAUTIONS

- Observe the safety rules for the installation site and equipment strictly (Industrial safety and health law, technical standard for electric facilities, extension rules, plant explosion guidelines, building standards law, etc).
- Read the maintenance manual carefully before use. Request a copy from the distributor of the Product or our Sales Department if the maintenance manual is not handy. A copy of maintenance manual should always reach the actual user of the Product.
- Select a sufficient product for the usage condition and application.
- Install protective equipment on the machine side when the machine is used for applications which may cause loss of human life or significant loss in facility, such as use for human transportation or elevators.
- Install an oil pan or other preventive devices in case of oil leakage due to failure or termination of service life when the machine is used for food processing equipment, clean room, or other applications that are sensitive to oil.
